Biochemistry Demystified

By Walker, Sharon; McMahon, David

McGraw-Hill Professional, 2008. Book Condition: New. Brand New, Unread Copy in Perfect Condition. A+ Customer Service! Summary: Chapter 1. Basic chemical concepts Concept of pH Forces that drive reactions Chapter 2. Basic structure of a cell eukaryotic, prokaryotic Storage of genetic information Metabolism Inport/export of biomolecules Protein production Chapter 3. Metabolism Energy Generation Glycolysis Citric Acid Cycle Electron transport Chapter 4. Protein Structure Amino acids--building blocks of proteins Concept of aromatic hydrocarbons Chapter 5. Protein synthesis & degradation Nitrogen fixation Assimilation of the ammonium ion Biosynthesis of the other amino acids Feedback inhibition in biosynthesis Chapter 6. Proteomics Determining amino acid sequence Determining protein function Use of antibodies Chapter 7. Carbohydrates Monosaccharides or ketones Complex carbohydrates Cellulose and glycogen Chapter 8. Lipid Metabolism Fatty Acids structure & metabolism Membranes Bioactive lipids - Cholesterol Chapter 9. Nucleic Acids and nucleotides Construction of RNA and DNA Degradation of RNA and DNA Chapter 10. Control of chemical processes Enzymes Catalysts what are they Substrate specificity Kinetics Chapter 11. Control of chemical processes signal biomolecules Epinephrine Insulin Epidermal Growth Factor Chapter 12. Specialty functions hotosynthesis as follows: Conversion of light energy into chemical energy Structure of chlorophyll Bacterial and plant photosynthesis Chapter 13. Genetics...
