Brand New Book ***** Print on Demand *****.Excerpt from Text-Book on Geodesy and Least Squares: Prepared for the Use of Civil Engineering Students This book is an outgrowth of a course of lectures prepared for instruction at Cornell at a time when there was but little available in English on the subject of geodesy outside of the Coast Survey Reports. Field practice in geodetic, hydrographic, and topographic surveying was introduced as a part of the course, the work advancing from year to year continuously over the territory as in actual practice. This furnished data for reduction, computation, and mapping, so that the course has been thoroughly practical. The lecture notes have been revised from time to time and printed by one of the duplicating processes for the use of the students, as they have seemed to meet our needs better than the books which have been published on the subject. In preparing the notes for publication they have been elaborated to give them the character of a text-book, and they have been thoroughly revised in the effort to bring the work up to the best standard practice. Acknowledgment is due to many friends for data and suggestions, and especially to Mr. Ross M. Riegel, C. E., an instructor in the college, for intelligent and conscientious aid in carrying through the revision and proof-reading. The material for the work has been gradually collected from various sources, some of which have been referred to in the text. The principal are: Clarke s Geodesy, Jordan s Vermessungskunde, Chauvenet s Method of Least Squares, Wright and Hayford s Adjustment of Observations, and the Reports and data furnished from the office of the Coast Survey. For a bibliography of...
